

Nobody treats drinking water the way we do!

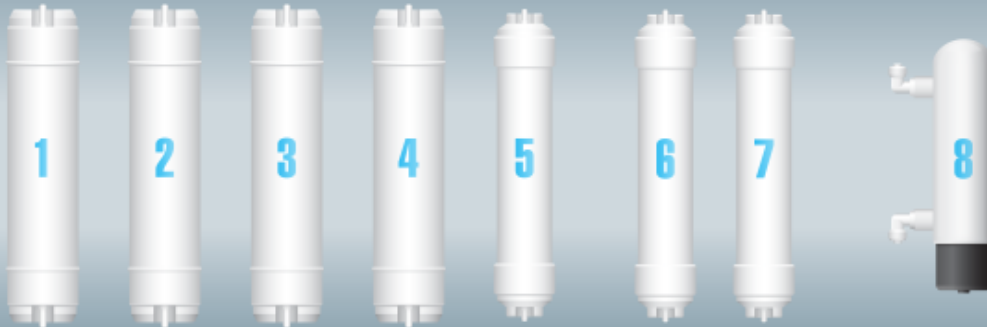

ALCONA Advanced Hydration System

Featuring 8-Stage Filtration

Removes sediment, harmful chemicals and unpleasant tastes.

Replaces essential minerals and balances PH.

UV rays eliminate 99.9% of microbes.

Think what *you* could be drinking.

ALCONA Advanced Hydration System

The genius of **ALCONA Advanced Hydration System (AHS)** is that it treats your vessels' own fresh water supply - that's water you already have on-board. So no more need for expensive bottled water.

ALCONA AHS treats your water with up to **8 stages of filtration**, including UV, which eliminates 99.99% of bacteria and germs. So you could be providing your crews with their own source of certified-clean, fresh-tasting, PH-optimized, and mineralized drinking water, wherever they are in the world.

The **ALCONA AHS** system is certified safe. Meaning it's actually safer than bottled water, which may easily have been compromised at source or in transit to your vessel.

With **ALCONA AHS** already on-board your vessel 24/7/365, there's no longer any need to source, re-order, transport or store tons of bulky bottled water every year.

Less risk. Less paperwork. Less transportation. Less storage. Less cost. And most importantly, less environmental impact. It's time to re-think your hydration situation.

AMOS Group Green Initiative

Working for a more Sustainable Economy

Several studies have suggested that as much of USD8,000 – USD14,000 per year is spent by each ship on buying, storing, transporting and disposing of bottled water (sources - WHO, IMO and IMPA).

Around 18,000 water bottles including caps and labels are discarded each year by each vessel, each ship produces up to 400KG per year of plastic waste with a great deal of this finding its way into our oceans. **Help us prevent this happening.**

ALCONA Advanced Hydration System - A sustainable solution. A step forward for reducing plastic waste!
